

HURRICANE SALLY

SEPTEMBER 2020

Hurricane Sally was the 18th named storm in the record-setting season of 2020. Making landfall along the coast of Alabama, northwest Florida, specifically Escambia County borne the brunt of Sally's wrath. The storm generated a surge of close to six feet, making it the third-highest surge on record for the area. With tens of thousands of residents impacted across the region, and both a public and individual assistance declaration made by the federal government, the survivors of Sally are beginning the process of long-term recovery.

WHAT WE DO: THE ELEVATED STUDIO

The Elevated Studio is partnering with its local partner, BRACE to provide disaster case management, volunteer training, detailed damage assessments, project estimating, and design and construction coordination services throughout the region
